### **DETAILED ACTION**

1. Claims 1-25 are pending in the application.

#### ***Drawings***

2. The drawing of Fig. 3 is objected to because informality: #204 and #202 should be changed to "3 Tessellation Factors" and "Np tessellation Factors". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

#### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance:

Claims 1, 12, 18 and 21 disclose a method and an apparatus for dual pass adaptive tessellation comprising: a vertex grouper tessellator operably coupled to receive primitive information and an index list, wherein the index list is received from a memory device; a shader processing unit coupled to the vertex grouper tessellator, wherein during a first pass, the shader processing unit receives primitive indices and an auto-index value for each of the plurality of primitive indices; a plurality of vertex shader input staging registers operably coupled to the shader processing unit, each of the plurality of vertex shaders input staging registers coupled to one of a plurality of vertex shaders such that in response to a shader sequence output, the vertex shaders generate tessellation factors; and the tessellation factors are provided to the vertex grouper tessellator such that the vertex grouper tessellator generates a per process vector output, a per primitive output and a per packet output. The closest prior art Boyd et al. (6,819,325) teaches assigning of vertex shader input registers to implicit data from the primitive tessellator. This controls the loading of vertex data from a stream, but rather is generated during primitive tessellation prior to the vertex shader; and Morgan et al. (5,821,940) teaches vertex index and index value and display list memory of polygon data to improve a method including a cache storage device and related control hardware operating in conjunction with a pipeline graphics display system; either singularly or in combination, the prior art fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
